# BEAUTY

Operator handbook • Login to end of event

**For a configured live event. Use the event links and operator login supplied by the event organiser. No development or installation work is part of this guide.**

# 1 / Open and register

**Three screens, three jobs**
**Hub:** registration, player list and pool preparation.
**Beauty Live:** the public display for players and spectators.
**Nakka Admin:** match administration, results and knockout progression.

## 1. Check the event after login

Check the event name and date in the Hub. Open the corresponding event in Nakka and confirm it is the same competition. If the event is wrong, stop and obtain the correct link; do not change dates or reset data to make it fit.

## 2. Open the public display

Open Beauty Live from the Hub. Put only this window on the venue screen and use fullscreen. Keep the Hub and Nakka Admin private. Check the event name and player list on the public screen. Keep the computer connected to power and awake.

## 3. Register players

Players register using the kiosk/tablet or the mobile registration link. To help someone, open **Register Player** in the Hub, search for their name and select it. Use **MITT NAMN FINNS INTE I LISTAN** only if the player is genuinely missing. Enter their photo/video choice and any message, then submit once.

## 4. Check Tonight’s Players

Confirm each registration appears once. Read messages and respect photo/video consent: **JA = yes; NEJ = no.** The source shows whether registration came from the kiosk, mobile or Hub.

**IN = included in the playing roster. OUT = not playing. STANDBY = waiting for a place. Confirm attendance before preparing pools. A status change is not proof that a player has been removed from an already-started Nakka draw.**

# 2 / Prepare and start

Complete these steps before matches begin.

## 5. Reconcile the players

Compare the Hub’s IN players with the Nakka event entries. Resolve missing players, duplicates and any identity warnings before proceeding. Do not create another entry simply because a name looks different. A healthy connection indicator alone does not prove the lists match.

## 6. Prepare the pools

Open the pool planner. Choose the intended pool size and the actual board numbers available tonight. Generate the pool preview and check that every intended player appears exactly once.

## 7. Review players and boards

To exchange players between pools, select the two players using the planner’s swap controls and apply the swap. Check the resulting pools and averages. These are draft changes until the pools are approved and sent.

Review each pool’s board plan. Where available, choose one or two boards and save the plan. If the planner prefills boards, still check them. Do not assume a board label in the Hub has assigned the actual matches in Nakka.

## 8. Send the approved pools

Check the event and final pool membership again. Use the Hub’s pool approval/send controls once, then wait for confirmation. Open Nakka and verify that the groups and players match the approved preview.

If the Hub reports an error or the outcome is unclear, inspect Nakka before retrying. Never resend pools to an event that has already started.

## 9. Start the event once

After checking the groups, saved plan and Nakka board setup, use the configured start control once. Confirm in Nakka that the event has started. Announce the first matches and boards. Scoring takes place through the normal Nakka scoring setup.

**Before the first dart: correct event • correct players • correct pools • actual Nakka boards checked • public display visible.**

## After play begins

Use **Nakka Admin** for tournament changes, match control and corrections. Do not regenerate pools, resend the draw or press Start again. A late arrival or withdrawal must be handled in the current Nakka event; adding a Hub registration alone does not put someone into an existing match.

# 3 / Run and finish

Nakka controls the competition. Beauty Live displays it.

## 10. During the pool matches

Keep the relevant Nakka scoring sessions open. Check that results, standings and the public display update. Use Nakka Admin for board changes or score corrections. Confirm the intended match and players before changing anything.

## 11. Move to the knockout stages

In Nakka Admin, verify that the relevant pool results and standings are complete. Use the event's agreed qualification rules to move the qualifiers into **Slutspel 1** and, where used, **Slutspel 2**. Review the entrants and byes before confirming. Use Nakka for this step; do not also assign the same bracket from the Hub.

Check that Beauty Live shows the same bracket. Use its stage/round controls to show the relevant matches. Continue scoring and advancing matches in Nakka.

## 12. Finish the event

Confirm the final and any third-place match results in Nakka. Check the winners shown on Beauty Live against Nakka before announcing them. Complete any event-closing action required by the normal Nakka workflow. Leave the winner display visible for the presentation.

## 13. Close safely

Check that the final results remain visible after refreshing Nakka. Log out of the Hub and Nakka on the shared computer. Close the public display when the presentation is finished. Leave the event records intact; do not reset the list, delete players or switch to the next event unless specifically instructed.

## If something goes wrong

**Display stops updating:** Check internet and the event shown, then refresh Beauty Live. If Nakka has the correct results, continue there while the display is restored.

**Save/send/start gives an unclear result:** Wait and inspect the current event in Nakka before taking another action. Do not repeatedly click or resend.

**Hub is unavailable:** Continue tournament administration in the existing Nakka event. Record new registration details for later reconciliation; do not start a second event.

**Internet fails or the draw is wrong:** Pause affected play, record the current scores and contact the designated event organiser. Do not guess results or rebuild the draw.

**Handover essentials: Hub link • Nakka event/admin access • registration link/tablet • event rules and boards • organiser contact. These must be supplied with this booklet.**
